

OLAT / LECTURE RECORDINGS (VIDEOPORTAL)

Videotapes that have been uploaded to the Videoportal of the Goethe-Universität¹ can be accessed from within an OLAT course.

1. The principle

A connection between the streaming platform and the learning management system is established.

Only students enrolled in the course will have access the video stream. A time limit for video access can be set in the course.

This also works for live streams.

2. Course preparation

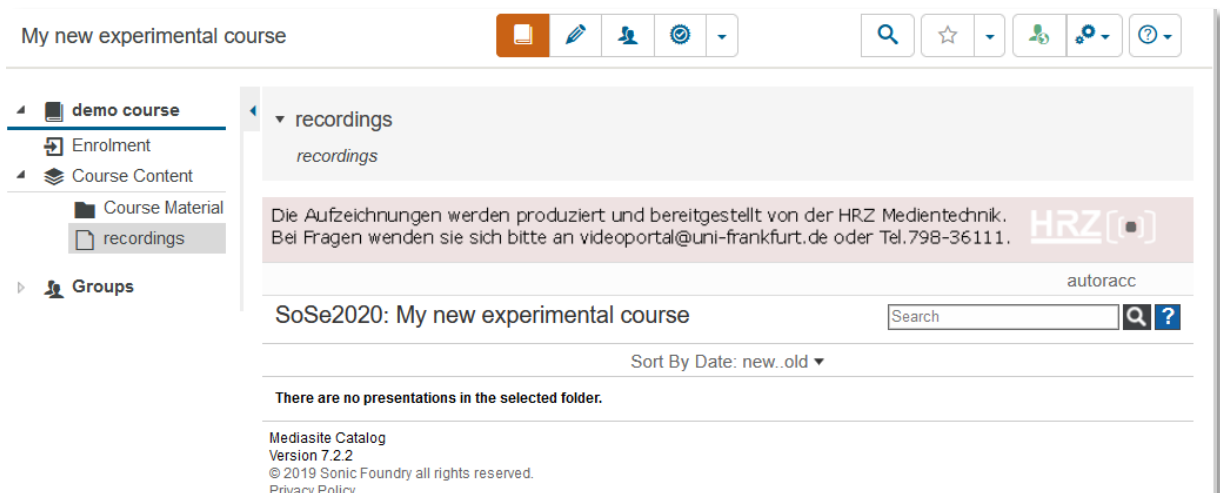

<i>Vorgehen</i>	<i>Illustration</i>
Open the editor view	
In the right hand menu Further course elements choose the LTI tool .	

¹ The Videoportal of the Goethe-Universität (videoportal.uni-frankfurt.de) should not be confused with the *eLecture-Portal* of studiumdigitale.

Vorgehen	Illustration
<p>Insert the new element in the menu</p>	
<p>Choose a short title (such as. recordings) and if you like a description as well.</p> <p>Open the tab Page content and choose Videos/Electures.</p> <p>Save.</p>	
<p>Publish these changes and close the Editor.</p>	
<p>Open this element from the course menu.</p>	

Opening this course element at least once is necessary, because it establishes a technical connection between the course and the videoportal.

You will have to agree to a Data transfer agreement, then you gain access to a video catalogue, which will show up empty at first.

This is where your recordings will be listed in the future and where your students can view them.

3. Check the filters

Only students who are enrolled in your course should be able to access the recordings.

To achieve this, you have to check **,depending on group‘** either in the *visibility* or in the *access* tab of the course element and choose the course group.

In this example of a course that was created with the *Kursvorlage 1*, the element *,recording‘* is subordinate to the element *course content*. It suffices to establish the group dependency in the superordinate element, for all subordinate elements do inherit it.

4. Find the Course ID

Procedure	Illustration								
Please open Details and Settings in your dropdown menu in the course header.									
Here you will find the ID. You can also see the course ID in the URL, it is the number after <i>RepositoryEntry/</i>	 <p>Information on this entry</p> <table border="1"><tr><td>Type</td><td>Course</td></tr><tr><td>ID</td><td>2150431800</td></tr><tr><td>External link to this learning resource</td><td>https://olat-ce...</td></tr><tr><td>External link to performance results</td><td>https://olat-ce...</td></tr></table>	Type	Course	ID	2150431800	External link to this learning resource	https://olat-ce...	External link to performance results	https://olat-ce...
Type	Course								
ID	2150431800								
External link to this learning resource	https://olat-ce...								
External link to performance results	https://olat-ce...								

5. Make the connection

Please contact the Medientechnik of the Goethe University videoportal@uni-frankfurt.de and tell them the id of the course. This team will then establish the technical connection between your recording and your course for you.
